 - 4.2 Authentication Gate (PIN Lock)
 - 4.3 Student Hub
 - 4.4 Parent Analytics Dashboard (Phone & Monitor)
 - 4.5 Teacher Class Dashboard (Phone & Monitor)
 - 4.6 Classroom Cast Screen (16:9 Presentation)
 - 4.7 Parental Consent (RA 10173 Disclosure)
 - 4.8 Settings & Data Lifecycle
5. Notes & Scope Exclusions

1. Introduction

SalamLearn is an offline-first, interactive mobile educational application designed to augment the traditional pedagogical methods of the Philippine Madrasah system. The mockups documented in this section align with the Department of Education's (DepEd) Refined Elementary Madrasah Curriculum (ALIVE) for Grade 1 learners. To address localized constraints such as intermittent internet connectivity, restriction of classroom devices to the educator only, and shared device usage at home, the underlying architecture relies on a local caching framework (Hive) alongside a unified Flutter codebase.

This document presents high-fidelity mockups — rendered in the intended color palette and iconography — for the primary screens of the system, and maps each screen to the functional requirement (FR) modules defined in the system specification. Where a screen is used on more than one form factor, the phone and monitor/tablet layouts are shown side by side in a single figure to make the responsive relationship explicit.

2. User Roles (Actors)

Actor	Access	Description
Learner (Child)	Restricted	Interacts only with the Student Hub and core educational modules. Cannot access settings, exit the app, or view external links. Operates the device 1-to-1, exclusively at home.
Parent / Guardian	Admin (PIN)	Requires a 4-digit PIN. Full CRUD rights over the child's profile, data synchronization, and privacy consents.
Asatidz (Teacher)	Admin (PIN)	Requires a 4-digit PIN. Creates class sections, enrolls students, views progress dashboards, assigns take-home modules, and operates presentation-level casting overrides during live classroom sessions.

3. Visual Design Rationale

The mockups use the “**Madrasah Classic**” palette — a deep teal and warm gold on a cream base — chosen to read as a school / madrasah product rather than a generic children's app, while remaining warm and legible for learners aged 5–11 (NFR — Usability, ISO/IEC 25010 child HCI guidelines).

Cream background
#FAF6EC

Deep teal (primary)
#0F6E56

Warm gold (secondary)
#EF9F27

Coral (alerts / badges)
#D85A30

Ink text
#2C2C2A

Teal is used for primary navigation and actions across all three actor experiences; gold marks rewards, highlights, and the learner's identity elements (avatar, streak); coral is reserved for alerts and achievement badges so it retains visual weight.

4.1 Onboarding & System Initialization

Module 1 — Onboarding & System Initialization

FR-1.1

FR-1.2

FR-1.3

Figure 4.1 — Onboarding & system initialization screen

On launch, the system silently verifies the integrity of cached offline assets (.mp3, .png, .json) and confirms available storage meets the 500MB floor, surfacing a high-priority alert if it does not (FR-1.1, FR-1.2). The learner's instructional language (English or Filipino) for non-Arabic UI text is set here (FR-1.3).

4.2 Authentication Gate (PIN Lock)

Module 2 — Authentication & Profile Management

FR-2.1

FR-2.3

Figure 4.2 — Shared Parent / Teacher PIN authentication gate

A single PIN-entry pattern gates both the Parent and Teacher administrative surfaces, keeping the Learner locked out of settings and exit controls. This corresponds to the encrypted 4-digit PIN created during profile setup (FR-2.3) and sits on top of the dual-state (online Firebase / offline hashed) authentication model (FR-2.1).

4.3 Student Hub

Module 3 — Student Hub & Rewards

FR-3.1

FR-3.2

FR-3.3

Figure 4.3 — Student Hub (Learner-facing dashboard)

A text-minimal, high-contrast dashboard with large touch targets sized for ages 5–11 (FR-3.1). Lesson tiles are shown as generic placeholders in this mockup set — see Section 5 for scope notes. The streak tracker (FR-3.2) encourages daily routine engagement, and the Digital Backpack (FR-3.3) surfaces badges earned from completed milestones. This screen is Learner-only and has no monitor/cast equivalent — it is never cast to an external display (see Figure 4.6).

4.4 Parent Analytics Dashboard (Phone & Monitor)

Module 5 — Parent Analytics Dashboard

FR-5.1

FR-5.2

FR-7.2

Figure 4.4 — Parent analytics dashboard: phone layout (left) and wide/monitor layout (right), same data

Raw local gameplay telemetry (accuracy, errors, time-on-task) is rendered into visual charts (FR-5.1), paired with automated, curriculum-aligned prompts suggesting physical practice or mediation based on recorded weak points (FR-5.2). The sync icon exposes the manual push-to-cloud trigger used once Wi-Fi is detected (FR-7.2). On the wider layout, metric cards expand from a 2-up to a 4-up row and the chart/suggestion panel sit side by side instead of stacked — the underlying content and requirements are identical between the two.

4.5 Teacher Class Dashboard (Phone & Monitor)

Module 6 — Teacher & Offline Classroom Mode

FR-6.1

FR-6.2

FR-6.3

FR-6.5

FR-6.6

FR-6.7

Figure 4.5 — Teacher class dashboard: phone layout (left) and wide/monitor layout (right), same data

Teachers manage class sections and enrollment via invitation codes (FR-6.1), review aggregated completion and mastery telemetry per student (FR-6.2), and assign take-home modules that surface in the Learner's home-mode Student Hub (FR-6.3). On the wider layout the per-student rows become a full data table with additional columns, and the Hot Seat (FR-6.6), Choral controller (FR-6.7), and progression override (FR-6.5) actions move into a persistent side panel instead of a stacked button list.

4.6 Classroom Cast Screen (16:9 Presentation)

Module 6 — Teacher & Offline Classroom Mode

FR-6.4

FR-6.6

FR-6.7

Figure 4.6 — Classroom cast screen, forced 16:9 landscape (monitor/TV only, no phone equivalent)

When the Teacher casts to an external projector or TV, the UI automatically scales and locks to 16:9 landscape so a single device can present to the whole class under a zero-student-device classroom model (FR-6.4). This screen exists only in the cast/monitor form factor — the Teacher's own phone continues to show the control screen from Figure 4.5 while this view is what the class sees. Hot Seat (FR-6.6) lets one volunteer solve directly on the host device while classmates observe; the Choral controller (FR-6.7) triggers whole-class repetition audio (Talqeen) without progression locks.

4.7 Parental Consent (RA 10173 Disclosure)

Module 2 — Authentication & Profile Management

FR-2.2

The image shows a mobile app screen for "Privacy & data consent". At the top is a green shield icon. The title "Privacy & data consent" is in bold. Below it, a text box explains that SalamLearn stores gameplay activity (accuracy, time-on-task, errors) locally on the device under RA 10173, and that this data is never sold and stays on-device unless synced to the Teacher when Wi-Fi is available. There is a checkbox with a green border, which is currently unchecked. To its right is the text "I consent to local telemetry collection for my child's learning progress." Below this, a smaller line of text states "A timestamp is logged the moment you agree." At the bottom, there are two buttons: "Decline" and "I agree". The "I agree" button is green and appears to be disabled, while the "Decline" button is white with a grey border.

Privacy & data consent

To personalize your child's learning and share progress with your Teacher, SalamLearn stores gameplay activity (accuracy, time-on-task, errors) locally on this device under RA 10173. This data is never sold and stays on-device unless synced to your Teacher when Wi-Fi is available.

☐ I consent to local telemetry collection for my child's learning progress.

A timestamp is logged the moment you agree.

Decline **I agree**

Figure 4.7 — Parental consent screen, shown during profile setup

Before a Learner profile can be created, the Parent must review a plain-language disclosure of what telemetry is collected and why, then explicitly opt in. Accepting logs a timestamp confirming consent under the Philippine Data Privacy Act of 2012 (RA 10173) (FR-2.2). The “I agree” action stays disabled until the consent checkbox is ticked, so consent cannot be skipped or defaulted-into.

4.8 Settings & Data Lifecycle

Module 7 — Settings & Data Lifecycle

FR-7.1

FR-7.2

FR-7.3

Figure 4.8 — Settings & data lifecycle screen

Independent volume sliders let the Parent or Teacher tune background audio, UI sound effects, and pronunciation voices separately (FR-7.1). The sync row duplicates the manual push-to-cloud trigger from the Parent dashboard (FR-7.2) so it is reachable even without opening the analytics view. The data section exposes the local erasure protocol (`Hive.deleteFromDisk()`) required to satisfy the “Right to be Forgotten” constraint (FR-7.3); this destructive action is visually separated in a warning-tinted card and should require a confirmation step before executing.

5. Notes & Scope Exclusions

Module 4 — Core Educational Modules (FR-4.1–FR-4.5) is intentionally excluded from this mockup set. Per the project team's specification notes, the specific game mechanics for this module (Tactile Recognition / tracing engine, Pronunciation Audio Mapper, Qur'an/Hadith media playback controller, Sirah/Aqidah storyboard, and the Fiqh/Taharah collision-and-array engine) are not yet finalized. Wherever a screen would otherwise surface Module 4 content — the Student Hub lesson tiles (Figure 4.3) and the classroom cast content area (Figure 4.6) — a generic placeholder is shown instead so the surrounding layout can still be reviewed independently of the final game designs.

With the addition of Figures 4.7 and 4.8, every functional requirement module in the specification except Module 4 now has a corresponding mockup: Module 1 (4.1), Module 2 (4.2, 4.7), Module 3 (4.3), Module 5 (4.4), Module 6 (4.5, 4.6), and Module 7 (4.8).
